21ST CENTURY SHOW # 66

SHOW OPEN, GRAPHIC AND MUSIC (24’40”)

TEASES

Coming up on 21st Century… (2.00”)

[SOUTH AFRICA TEASE]

In South Africa, precious resources at risk (Sound Up: “We are heading for a catastrophe in the future”) - coal-mining’s lethal legacy. (10’97”)

[MEXICO TEASE]

A surprising group of migrants in Mexico, a long way from home (Sound Joao: “I miss my parents very much, I miss them more than ever”)....Their past is often tragic, their future uncertain. (23’69”)

[CONGO TEASE]

In the Republic of the Congo – sudden sickness and sudden loss: (Sound Up “when he started having diarrhea, he became like a skeleton. Within a half day he died”) The struggle against cholera. (18’34”)

1
ANCHOR INTRO #1 (22”)

Hello, and welcome to 21st Century. I’m Daljit Dhaliwal.

[Intro: South Africa, Coal’s Lethal Legacy]

The world is becoming desperately short of fresh water, threatening our very survival. In South Africa, the country’s water supply is at risk as the nation’s energy needs grow. Can this be turned around before it’s too late? Here’s our story.

South Africa: Coal’s Lethal Legacy (10’40”)

</tbody>
</table>
LUKAS: (In Zulu)

“I used to pack up my truck with pumpkins and go to the highway to sell them. The drivers would stop and buy them.” (7’)

NARRATION:

LUKAS WITH COWS

Living in what’s known as the “bread basket” of the country, in the fertile north-east, Lukas also had a thriving herd of cows and his own ample supply of fresh water, right on his farm. (14’)

CLOUD OF COAL DUST NEXT TO LUCAS’ FARM

But, in 2008, his troubles started. The abandoned coal-mine adjoining his farm, having been previously shut-down, re-started operations - (BOOM) shattering not only his tranquility, but Lukas’ dream. (18’)

HERD OF COWS

As the mines blast to access the coal seams, dense clouds of choking dust smother everything in their path – like this blast caught by an amateur filming close by. (13’)

AMATEUR FOOTAGE OF BLAST

DINNA: (In Zulu)

“The noise is very loud and the house is cracked. The whole house shakes.” (4’)

NARRATION:

DINNA ON CAMERA

DINNA CLEANING THE HOUSE

Lukas’ wife, Dinna, explains how the blasting for coal next-door drove the family from their home fearing it would collapse on top of them. They now live in the small barn alongside. (13’)

NAT SND LUKAS (in Engl)

“Blast…… cracked” (2’
As well as having his home crumble around them, Lukas, in the last 4 years, has also lost half his cows. He believes they died from eating grass coated in coal-dust and from drinking polluted ground-water. His crops, a vital food source and income for his family are also failing - as is the quality of his water supply. (28')

“Now hardly anything comes out and, what does, is really dirty.” (5')

“We are heading for a catastrophe in the future.” (2')

Terence McCarthy, Professor of Geology at Wits University, in Johannesburg says that the water affected by coal-mining is more than just dirty. Its toxicity is a grave threat to the health and livelihoods of not just Lukas but to millions of South Africans, he says. And the entire country’s future water supply is now in jeopardy. The repercussions on South Africa’s food security are enormous. (29')

“The areas where most of the coal-mining is taking place are our primary food producing regions and we are impacting on those.” (7')
LANDSCAPE SHOTS/PROCESSING PLANT

NARRATION:
And he fears it’s an impact that will be felt for centuries to come. This lethal legacy is a result of both coal use and the coal-mining activity itself, he says. Not only does the burning of coal for electricity-production generate gases which contribute to global warming – South Africa’s greenhouse gas emissions are double the global average - but the coal-mining process here, which is largely open-cast, can leave water-supplies unusable for irrigation, for industry and for consumption by animals and humans. (39’)

GRAPHIC

As rain-water seeps through to the rocks exposed by coal-mining below ground, a chemical process takes place which contaminates and acidifies the water. The result is acid water, which seeps into the rivers. (16’)

MCCARTHY ON CAMERA

“*We are destroying the ecology of our main river system, and there is nothing we can do about it except stop mining.*” (5’)

NARRATION:

But many argue that South Africa’s mining sector is essential – development is booming and coal is a critical source of both export income and employment. Ninety percent of the country’s electricity supply comes from the burning of coal. (16’)

COAL MINES

POWER STATIONS
The extent of the country's reliance on coal is clear to see. In the province of Mpumalanga, where Lukas lives, the landscape is scarred with huge coal-fired power stations and vast open-cast mines, the surface of the countryside literally having been scraped away. (22’)

And this environmental and social destruction is exactly what is feared in the neighbouring province of KwaZulu Natal. (6’)

This high plateau is an area of pristine natural beauty, its rich biodiversity of wildlife and plants making it unique in the country. It’s also an important farming area with the nation’s highest level of rainfall and is the source of many of South Africa’s rivers, supplying water to tens of millions of people. (32’)

“This is the water production area for most of the country.” (3’)

Angus Burns of World Wildlife Fund and coordinator of a project to protect the Grasslands, says this area of pristine natural beauty is now also at risk. Underneath these green meadows lie huge deposits of coal, still largely untouched by mining. But, if mining companies have their way and are granted licences to open new...
mines here, this garden of Eden will be destroyed – perhaps for ever. (32’)

**ANGUS BURNS:** (In English)

“We are looking essentially at a land-grab through the mining industry. What is going to happen if a multitude of mines open? It will completely obliterate the water supply in this area. The impact on communities will be devastating. There’s no way that the damage that will be caused to what we term the ecological infrastructure of the area can ever be truly mitigated.” (22’)

**NARRATION:**

But mitigation efforts are underway in South Africa to clean up the impact of coal mining. eMalahleni Water Reclamation plant is run by Anglo American Mines to counteract the environmental pollution from their mines. Now, 30 million litres of contaminated water from three of their mining operations are treated per day and turned into drinking water for the local community. Peter Gunther designed this system, the first of its kind in the world. (34’)

**PETER GUNThER:** (In English)

“Quite simply, any water is treatable. It’s never too late, there’s always something you can do about the situation.” (5’)

**NARRATION:**

Only about 10% of water affected by mining is currently being treated, but Peter predicts that a lot more will be in the future as this model is
adopted by other mining operations. (13’)

PETER GUNTHER: (In English)

GRAPHIC

“I do believe this is a sustainable model going forward into the future that people can replicate.” (4’)

NARRATION:

STILLS OF BAN KI-MOON

And United Nations Secretary General, Ban ki-Moon, believes the same, hailing this effort as one of seven global projects which successfully combat the negative impacts of climate change. (12’)

MCCARTHY ON CAMPUS

But even as experts recognize this is a step in the right direction, Professor McCarthy doubts the long-term viability of such operations because of the cost. (11’)

TERENCE MCCARTHY: (In English)

AERIAL SHOTS

“Who pays? You know by the time these things come to light, the mining companies that mine the coal are long disappeared. To really

GRAPHIC

overcome the problem in perpetuity you have got to neutralize the entire reservoir of acid that exists underground there, which might be huge.” (17’)

NARRATION:

LUKAS AND DINNA AT HOME

As for Lukas and his wife, the pollution is so bad they feel they have no option but to leave and start the farm somewhere else. (9’)

LUKAS:

“The mine must pay me - I can’t stay here.” (2’)

DINNA ON CAMERA
LUKAS AT ANC OFFICE

DINNA: (In Zulu)
“I don’t know what to do, my heart aches the mine is treating us so badly”. (5’)

NARRATION:
Lukas is now seeking legal help for his case. (3’)

LANDSCAPE SHOTS

While he and Dinna wait for an answer from the mine, many scientists and activists are calling for a complete halt to mining until an effective and economically viable solution to the contamination can be found. Others call for a block on mining in all areas where rivers start. They believe that protecting the world’s water resources is not a choice; it’s an imperative for people everywhere. (28’)

ANGUS BURNS: (In English)
“The one thing they cannot survive without is water – you remove that from the equation and they are doomed.” (8’)

TAG

Since our film was shot, the South African government has pledged almost 32 million US dollars over two years to deal with acid water in the region most affected by mining. (11’91”)
[ANCHOR INTRO #2]

[MEXICO: AFRICAN MIGRANTS]

Mexico has long been a haven for poor migrants from Latin America. But this is a story about an unexpected group of people who have travelled much farther in search of a place to call home. This is where their journey into Mexico begins. (15’44")

[SCRIPT – SEGMENT # 2 (7’18”)]

</tbody>
</table>
Padre Flor Maria heads Mexico's Belen Shelter for migrants. He sees thousands of migrants every year and is amazed by how many have travelled enormous distances to reach Mexico. (13’)

 PADRE FLOR MARIA: (In English)
“"We are welcoming people from as far as Bangladesh, Nepal, Pakistan, Nigeria, Jordania, Palestine and from the Horn of Africa, many, many.” (15’)

BOYS PLAY AT SHELTER
And he says he knows why most come to Mexico. (4’)

 PADRE FLOR: (In English)
“"After 9/11, this border, south border, is the only open gate still for all the northern continent.” (10’)

STATUE OF LIBERTY
And that is where many Africans and Asians are heading – to that beacon of prosperity on Mexico's northern border, the United States. (9’)

(NAT SOUND: Interview with Eritrean Migrants:
 MAN 1: “We hope they accept us.”
 MAN 2: “We hope”) (3’)

TWO MIGRANTS ON CAMERA
These two young Eritreans are in transit. Their families paid smugglers a small fortune to bring
them half way around the world to Mexico. (10’)

(SOUND UP: Intv with Eritrean Migrants):

MAN 1: "Maybe $22,000".

Q: “That’s what you’ve spent so far?"
MAN 2: “From Sudan, from my country to here.”) (7’)

HARTMARK: (In English)

HARTMARK ON CAMERA
“It is unfortunate that people live in such desperate conditions that they actually try to do it, and they spend several lifetimes of savings.” (7’)

NARRATION:
HARTMARK AT AGENCY/IN OFFICE
Hans Hartmark, head of the UN Refugee Agency’s office in southern Mexico, says Africans often pay a high price to get to America. (8’)

HARTMARK ON CAMERA
“… which they in some cases have to borrow and they would indent themselves and their family that stays behind.” (7’)

JOAO RAMIREZ : (In Spanish)
RAMIREZ ON CAMERA
“You feel loneliness, nostalgia for your people, your land, being far from what you love the most, from the blood of Africa.” (8’)

NARRATION:
ARCHIVE SHOTS RAMIREZ
African Joao Ramirez came to Mexico fleeing dangers at home he says. Ramirez was a soldier in his native Equatorial Guinea, the only
Spanish-speaking country in Africa. His troubles began when he and his family joined a political movement opposing the government. Joao says his mother, father and brothers were assassinated for their opposition, and he was imprisoned and brutally tortured. (29’)

JOAO RAMIREZ: (In Spanish)

"I still have scars on my back from electrical burns, just like I have this one, which they did with a wire." (5’)

NARRATION:

Finally Joao was finally released but had to leave behind his wife and daughters in Africa.

STREET SHOTS

He went into exile in Columbia, eventually heading north through Central America,

WOODS AND CEMETERY

trudging through miles of jungle, sleeping in cemeteries like this one, reminding him of his parents. (21’)

JOAO RAMIREZ: (In Spanish)

“I miss my parents ...very much... I miss them more than ever.” (12’)

NARRATION:

Finally almost two years later, he crossed into Mexico by raft, presented himself to Mexican authorities and applied for asylum. Although safe, Joao says the pain of leaving his children behind was unbearable. (16’)

JOAO RAMIREZ : (In Spanish)

"I yearned to have them with me, to hear them, to wake up and see them, to tuck them in at
ROSA WITH DAUGHTERS

NARRATION:
Joao urged his wife Rosa to sell their house back home to pay the family’s enormous travel expenses to meet him. But with his asylum status still in question, Rosa and the girls with friends’ help had to resettle in the nearby country of Honduras. (16’)

ROSA: (In Spanish)
“We gave me work, but something very sad happened to me there, that really marked my life. Sometimes it’s very difficult.” (9’)

NARRATION:
Rosa was raped. An astounding six out of ten migrant women are sexually abused. (6’)

ROSA: (In Spanish)
“I feel heartbreak when I remember because a man abused me, it is very sad.” (7’)

NARRATION:
She reported the crime to the police and two men were arrested. But after receiving threats from them from jail, she fled, and once again she was on the run. Using false documents, Rosa and her daughters finally got across the border into Mexico. (19’)

(SOUND UP: MUSIC AT SCHOOL)

DANCE SHOWCASE AT SCHOOL
By this time Joao had a job teaching English at this high school. And, three years after leaving night.” (5’)

WOODS AND RIVER

NARRATION:
Equatorial Guinea, Mexico has granted him asylum. Best of all, after missing so many precious moments with his wife and daughters, Joao is reunited with his family. Six-year old Anny and five-year old Nancy could not be more thrilled. But a cloud hangs over the family – Rosa and the girls have not been granted refugee status. (39’)

Rosa: (In Spanish)

“If we can’t stay here, where would we go without papers? Because if they return us to our country, we will be put in jail and they will take our girls away. They will take them and I don’t know what will become of them.” (13’)

Narration:

For now, Rosa, her girls and so many other African migrants in Mexico live in limbo. Some sustained by their faith, others by the dream and hope for a better life. (15’)

ANCHOR INTRO #3

[DRC: CONGO CHOLERA]

The disease is carried by the source of life – water – but it can lead to death within hours. Cholera recently swept through the Republic of the Congo in central Africa with deadly effect – but now efforts are under way to protect the country’s most vulnerable people. (19’03”)
SCRIPT – SEGMENT # 3 (2’56”)

REPUBLIC OF CONGO: THE FIGHT AGAINST CHOLERA

VIDEO

BOYS & BOATS AT CONGO RIVER
Slicing through the heart of Africa, the Congo river. For centuries, it carried people and goods through some of the continent’s most inaccessible rain forests. (10’)

PACKING UP THE BOATS
This mighty waterway also carries disease. Last year, a cholera outbreak spread down and across the river into the Republic of Congo, from a neighboring country. (10’)

NARRATION:
Particularly hard hit was Isle M’bamou - a large island about an hour from the Republic of Congo’s capital. It has thirteen villages. When cholera hit, people here had no idea what it was or where it came from. (13’)

AUDIO

DIMITRI AT HIS HOME
Dimitri Fabrice Okoulokami, a local fisherman, lost his nephew to the disease. (4’)

OKOULOKAMI: (In French) M

DIMITRI ON CAMERA
“For my nephew, when he started having diarrhea, he became like a skeleton. Within a half day he died.” (7’)

NARRATION:
Dimitri mourns his nephew and understands his parents' pain. He too, almost lost his own son, Steward, to cholera. (8’)

**DIMITRI ON CAMERA**

“*It started at 3am. By 8 am, he had lost weight.*” (7’)

**NARRATION:**

**CHILDREN PLAYING**

Steward was lucky, after six days in the hospital, he fully recovered. (3’)

**PEOPLE WASHING BY THE WATER**

The island has no running water and very few latrines; the perfect place for cholera to thrive. (5’)

When the outbreak hit the nearby capital, squatter settlements with poor sanitation were worst hit. Latrines here feed directly into the same stream in which children play and people bathe. (12’)

**RIVER SHOTS**

John De Dieu Konongo is a Cholera Specialist with the World Health Organization. (4’)

**KONONGO ON CAMERA**

“*Cholera is a disease linked to poor hygiene, a disease caused by poor sanitation, a disease caused by lack of access to water. It is called the ‘dirty hands’ disease.*” (9’)

**NARRATION:**

In a race against time, efforts to combat cholera here have been launched by the United Nations. (4’)

17
NARRATION:

On Isle M'bamou, there are now chlorination points. Workers have been trained to purify water from the Congo river used by households. (8’)

Latrines have been built in public spaces like markets and schools. A programme is now teaching villagers the importance of hygiene. Children are learning about washing their hands with soap and using the new facilities. (14’)

But as the next rainy season is fast approaching, the potential for new outbreaks of waterborne diseases like cholera continues to threaten the communities along the Congo.

River – communities that now stand a much better chance of protecting themselves and their families. (17’)

And that’s all for this edition of 21st century. Sharing the world’s stories, I’m Daljit Dhaliwal. We’ll see you next time, until then goodbye. (10’)

TEASE

Coming up on a future episode of 21st Century……..

[INDIA: SAVING ELEPHANTS]

"India’s population is growing rapidly...encroaching on land once known as elephant territory...putting elephants at risk (Sound Up “In Asia we have a very lively, very serious human/elephant conflict”)...but now innovative solutions may help these gentle giants. (21’63’’)
